1. The first step is to identify the problem. This involves understanding the symptoms and the context in which the problem is occurring.

2. The second step is to gather information. This involves collecting data and evidence that can help to identify the cause of the problem.

3. The third step is to analyze the information. This involves examining the data and evidence to identify patterns and trends that can help to identify the cause of the problem.

4. The fourth step is to develop a solution. This involves identifying a course of action that can be taken to address the problem.

5. The fifth step is to implement the solution. This involves putting the solution into practice and monitoring its effectiveness.

6. The sixth step is to evaluate the results. This involves assessing the outcomes of the solution and determining whether the problem has been resolved.

7. The seventh step is to document the process. This involves recording the steps that were taken to identify and solve the problem, so that the process can be repeated in the future.

8. The eighth step is to communicate the results. This involves sharing the findings of the investigation with the relevant stakeholders.

9. The ninth step is to review the process. This involves reflecting on the investigation process and identifying areas for improvement.

10. The tenth step is to conclude the investigation. This involves summarizing the findings and the actions that have been taken to resolve the problem.
